Historical ecology, Santa Ana River, Upper Santa Ana River Watershed, City of Riverside, City of Jurupa Valley, Riverside County, Riverside Gateway Parks, river, channel, arroyo, vegetation, habitat, scrub, forland, wetland, marsh, alluvial, riparian, landscape change, historical condition, historical habitat types, pre Euro-American

Summary

These datasets depict the historical habitat types and channels of a small 4.5 mi (~7 km) stretch of the Santa Ana River Parkway and its surroundings, including a portion of the cities of Riverside and Jurupa Valley, representing average conditions prior to substantial Euro-American modification (~late 1700s-late 1800s). The data were also used to compare landscape change from historical to current conditions, including change in vegetation cover and channel alignment.

The study area boundary encompasses nearly 13,000 acres (30 square kilometers) centered around a portion of the Santa Ana River that includes much of the City of Riverside and the City of Jurupa Valley. It extends from the Fairmount Park and Lake Evans from the northeast, near the junction of the California state route 60 and 91, to the Martha McLean-Anza Narrows Park to the southwest. The other Riverside Gateway Parks within the study area include Loring Park, Carlson Park, Santa Ana River Greenway, Tequesquite North Extension, 5200 Tequesquite Avenue, and Tequesquite South Extension.

Extensive supporting information, including bibliographic references, analyses, and research methods, can be found in the accompanying report:

San Francisco Estuary Institute. 2023 Reconnecting Riverside with its River: Integrating Historical and Urban Ecology for a Healthier Future. Funded by the California State Coastal Conservancy. SFEI Publication #1133, San Francisco Estuary Institute, Richmond, CA.

The report and GIS data are available at the project website: <https://www.sfei.org/projects/reconnecting-riverside-with-its-river>

Description

This geodatabase contains three feature classes representing the historical landscape within the study area including:

- Historical_Habitats
- Historical_Channels
- Historical_Distributaries

A geographic information system was used to collect, catalog, and synthesize the spatial components of the study area. Historical maps and aerial photography were georeferenced, allowing us to compare historical layers to each other and to contemporary aerial photography and maps. Additionally, the georeferenced maps and aerial images were used as a means to geographically locate information gathered from textual and photographic data.

Channels were mapped as line features. Habitat type mapping was mapped as polygon features.

--

Attribute table fields for historical datasets:

Habitat_Type: Historical Habitat or Channel Type

Interp_Cert: coded H (high): feature definitely present; M (medium): feature probably present; or L (low): feature possibly present.

Shape_Cert: coded H (high): mapped feature expected to be 90%-110% of actual feature size; M (medium): expected to be 50%-200% of actual size; L (low): expected to be 25%-400% of actual size.

Loc_Cert: H (high): expected maximum horizontal displacement less than 50 m; M (medium): less than 150 m; L (low): less than 500 m.

S_Digitize: Source data used to digitize the habitat feature or channel segment.

S_Interp1: Interpretation Source 1 - Primary data used to interpret the mapped habitat feature or channel segment, if other than the digitizing source.

S_Interp2: Interpretation Source 2 - Data used to support mapping of the channel segment – additional documentation/evidence other than Interpretation Source 1.

Name: The historical and/or contemporary name of the feature, if applicable.

Source_Quotes: Historical textual quotes supporting the mapped feature.

Notes: Additional documentation about the feature.

Notes2: Additional field for documentation about the feature.

SHAPE_Length: Length of the channel segment in meters.

SHAPE_Area: [polygons only] Area of the feature in square meters

--

Use limitations

Confidence or certainty varies geographically due to differences in source data or methods. This geodatabase provides direct information about the certainty level of each feature's presence, shape, and location, noted in the fields titled *Interp_Cert*, *Shape_Cert*, and *Loc_Cert*, respectively. These certainty levels are rated as high, medium, or low. Referring to these attributes allows the user to intelligently assess the applicability of the data for the chosen technical question.

Technical users are strongly encouraged to read the full study report (San Francisco Estuary Institute 2023 – <https://www.sfei.org/projects/reconnecting-riverside-with-its-river>) to gain a stronger understanding of the strengths and limitations of the dataset.

In no event shall the creators, custodians, or distributors of this information be liable for any damages arising out of its use (or the inability to use it). These data are not legal documents or of survey quality and are not intended to be used as such. Although extensive effort has been made to produce error-free and complete data, all geographic information has limitations due to the scale, resolution, date and interpretation of the original source materials. Users should consult available data documentation (metadata) for these particular data to determine limitations and the precision to which the data depict distance, direction, location or other geographic characteristics. Data may be subject to change without prior notification. If this data is modified, changes should be documented in a metadata record that should accompany all redistributed data. If data is transmitted or provided in any form to another user, the data must be accompanied by a copy of this disclaimer and all documentation provided with the original data set, including the full metadata record. SFEI requests that the use of these data in any map, publication, or report should cite the data source(s) used and give proper attribution and credit to the originators of the data.

FIELD Source_Quote ►
 * ALIAS Source_Quote
 * DATA TYPE String
 * WIDTH 250
 * PRECISION 0
 * SCALE 0

[Hide Field Source_Quote ▲](#)

FIELD Source_Quote2 ►
 * ALIAS Source_Quote2
 * DATA TYPE String
 * WIDTH 250
 * PRECISION 0
 * SCALE 0

[Hide Field Source_Quote2 ▲](#)

FIELD Name ►
 * ALIAS Name
 * DATA TYPE String
 * WIDTH 100
 * PRECISION 0
 * SCALE 0

[Hide Field Name ▲](#)

FIELD Notes ►
 * ALIAS Notes
 * DATA TYPE String
 * WIDTH 250
 * PRECISION 0
 * SCALE 0

[Hide Field Notes ▲](#)

FIELD Notes2 ►
 * ALIAS Notes2
 * DATA TYPE String
 * WIDTH 250
 * PRECISION 0
 * SCALE 0

[Hide Field Notes2 ▲](#)

FIELD SHAPE ►
 * ALIAS Shape
 * DATA TYPE Geometry
 * WIDTH 0
 * PRECISION 0
 * SCALE 0
 * FIELD DESCRIPTION
 Feature geometry.

* DESCRIPTION SOURCE
 Esri

* DESCRIPTION OF VALUES
 Coordinates defining the features.

[Hide Field SHAPE ▲](#)

FIELD Shape_Length ►
 * ALIAS Shape_Length
 * DATA TYPE Double
 * WIDTH 8
 * PRECISION 0
 * SCALE 0
 * FIELD DESCRIPTION
 Length of feature in internal units.

* DESCRIPTION SOURCE
 Esri

* DESCRIPTION OF VALUES
 Positive real numbers that are automatically generated.

[Hide Field Shape_Length ▲](#)

FIELD Shape_Area ►
 * ALIAS Shape_Area
 * DATA TYPE Double
 * WIDTH 8
 * PRECISION 0
 * SCALE 0
 * FIELD DESCRIPTION
 Area of feature in internal units squared.

* DESCRIPTION SOURCE
 Esri

* DESCRIPTION OF VALUES
 Positive real numbers that are automatically generated.

Metadata Constraints ►

CONSTRAINTS

LIMITATIONS OF USE

Confidence or certainty varies geographically due to differences in source data or methods. This geodatabase provides direct information about the certainty level of each feature's presence, shape, and location, noted in the fields titled Interp_Cert, Shape_Cert, and Loc_Cert, respectively. These certainty levels are rated as high, medium, or low. Referring to these attributes allows the user to intelligently assess the applicability of the data for the chosen technical question.

Technical users are strongly encouraged to read the full study report (San Francisco Estuary Institute 2023 – <https://www.sfei.org/projects/reconnecting-riverside-with-its-river>) to gain a stronger understanding of the strengths and limitations of the dataset.

In no event shall the creators, custodians, or distributors of this information be liable for any damages arising out of its use (or the inability to use it). These data are not legal documents or of survey quality and are not intended to be used as such. Although extensive effort has been made to produce error-free and complete data, all geographic information has limitations due to the scale, resolution, date and interpretation of the original source materials. Users should consult available data documentation (metadata) for these particular data to determine limitations and the precision to which the data depict distance, direction, location or other geographic characteristics. Data may be subject to change without prior notification. If this data is modified, changes should be documented in a metadata record that should accompany all redistributed data. If data is transmitted or provided in any form to another user, the data must be accompanied by a copy of this disclaimer and all documentation provided with the original data set, including the full metadata record. SFEI requests that the use of these data in any map, publication, or report should cite the data source(s) used and give proper attribution and credit to the originators of the data.
