PRIORITIZATION OF STATUS AND TRENDS MONITORING ELEMENTS

	Program Element	Annual Cost	Priority	RMP Objective Addressed	Comments	Possible Modifications and Cost
			,	·		
	Water Chemistry	\$400K	High	Obj. 1 - Limited value for spatial and temporal trends.	Emphasis on water chemistry declining focus of TMDLs for PCB and Hg on tissue.	Re-examine power analysis? Possible reduction in number of sites (\$50K to 100K? savings)
				Obj. 5 - Important for assessment of Water Quality Objectives (WQOs)	<u> </u>	Reduce number of site by 50% (~\$150K savings)
					Concentrations of some pollutants greater in the winter	Include winter sampling (\$100K expenditure)? Alternate summer and winter? Re-evaluate analyte list? Reduce frequency of some parameters (e.g., PAHs)?
						Conduct totals only for PCBs, PAH, and pesticide (\$60K saving)?
	Sediment Chemistry	\$250K	High	Obj. 1 - High value spatial patterns/none for temporal	Are we getting right amount of spatial data?	Reduce/increase number of sites? Do sediment cores instead of surface samples?
				Obj. 2 - High, model endpoint for PCBs Obj. 5 - High, will evaluate Sediment Quality Objectives (SQOs)	SQOs to be promulgated in 2007	Re-examine power analysis? Possible reduction in number of sites? Change the analyte list or frequency of analysis of analyte list?
	Bivalve	\$125K	High	Obj. 1 - Critical long-term spatial and temporal trends	Trends since 1980 critical for evaluating PCB	Go biennial (\$60K savings?)
	Bioaccumulation		8	Try, triangle grant and provide and	management actions	See, 1
				Obj. 2 - Assist in verification of models	Need to maintain historic sites that are consistent with SMW program	Add back Horshoe Bay site to provide comparison to State Mussel Watch (SMW)program (~\$13K expenditure)
					Need to evaluate impact of delta outflow during the wet season	Re-institute wet season deployment at BC10 (Yerba Buena Island) \sim \$13K expenditure
						Eliminate maintenance cruise (~ \$10K savings) Reduce number of sites?
	Sportfish Bioaccumulation	\$83K	High	Obj. 1 - Important for trends in impairment	Most essential impairment indicator for many pollutants	Change the triennail program to a quadrennial or quintennial, savings of \$20K or \$33K respectively
				Obj. 4 - Essential for evaluating human exposure		Monitor fewer species (2 major fish, striped bass and croaker, small fish)
				Obj. 5 - Important for screening values and TMDL targets		
Toxicity	Sediment Toxicity	\$90K	High	Obj. 4 - High, indicator of toxicity	Need to incorporate seasonal variability?	Add a winter sampling component alternate dry and wet years?
				Obj. 5 - High, SQOs to be promulgated in 2007	Do we understand what is causing toxicity?	Increase TIEs (expenditure \$20K per test)
					Is this a helpful indicator for managers?	Reduce number of sites?
	Aquatic Toxicity	\$12K	Low?	Obj. 4 - Low, indicator of toxicity	Important for non-persistent chemicals Better to look in watersheds where signal is stronger?	Add in other endpoints such as growth and fecundity.
	riquatio romenty	Ψ1211	2011.	Obj. 5 - Medium, used to evaluate WQOs	Conducted every 5 years	rad in outer enaponies such as grown and recunatey.
	Episodic Toxicity	\$143K	Medium?	Obj. 3 - Medium, info used to determine sources, pathways and	Dimishing toxicity in recent years	Reduce frequency to biennial (\$70K exp.) or triennial program (\$47K exp.)?
				Obj. 4 - Medium, indicator of toxicity	Not a trend indicator	Include sediment, aquatic toxicity and benthos in an effort to identify impacts.
				Obj. 5 - Medium, used to evaluate WQOs	Important for non-persistent chemicals	Could include TIEs as well.
USGS	Hydrography and	\$110K	Medium	Obj. 1- Trends in DO, primary production, turbidity	Wetland restoration may impact these parameters	Reduce frequency?
Studies	Phytoplankton			Obj. 5 - High, used to evaluate oxygen WQO	Basic information on Bay	
	Suspended	\$250K	High	Obj. 1- Trends in turbidity	This program is currently being evaluated by the RMP,	
	Sediment			Obj. 2 - Used to assess models Obj. 3 - Used to develop load calculations	USGS, and the US Army Corps of Engineers	
				Obj. 5 - Used to evaluate narrative WQOs		
New	Cormorant eggs	\$40K	High	Obj. 1 - Long-term and spatial trends	High values as a long-term trend indicator for organics	Add to program on biennial basis (\$20K per year)
Studies				Obj. 4 - Wildlife exposure		
	Benthos	\$60K	High	Obj. 4 - Effects on benthos	Benthic community health to be part of new SQOs	Add to program (\$60K). Would commence in 2007.
				Obj. 5 - High, SQOs to be promulgated 2007		

RMP Objectives:

PRIORITIZATION OF STATUS AND TRENDS MONITORING ELEMENTS

- Objective 1 Describe the distribution and trends of pollutant concentrations in the Estuary
- Objective 2 Project future contaminant status and trends using current understanding of ecosystem processes and human activities
- Objective 3 Describe sources, pathways, and loading of pollutants entering the Estuary
- Objective 4 Measure pollution exposure and effects on selected parts of the Estuary ecosystem (including humans)
- Objective 5 Compare monitoring information to relevant benchmarks, such as TMDL targets, tissue screening levels, water quality objectives, and sediment quality objectives
- Objective 6 Effectively communicate information from a range of sources to present a more complete picture of the sources, distribution, fate, and effects of pollutants and beneficial use attainment or impairment in the Estuary ecosystem.
