

LIST OF REVIEW PANEL RECOMMENDATIONS  
FOR IMPLEMENTATION BY THE TRC

#	RECOMMENDATION	WHO	RESPONSE
4	Increase emphasis on biological effects	TRC	Extend the Exposure and Effects Pilot Study for 2 additional years (2006 and 2007). Emphasize this area for future grant proposals.
7	Closer collaboration with CEP	TRC/SC	Set up joint meetings with CEP, TRC and SC. Develop a better conceptual understanding of RMP and CEP to avoid overlap.
8	Greater emphasis on publishing in journals	SFEI/TRC	The RMP is moving in this direction. Develop the detailed workplan to include publications.
11	Enhance interaction with similar programs and activities in other parts of California	SC/TRC	Prepare a memo listing all RMP collaborative projects. Collaboration with many organizations is good. Could improve with some such as CEP, IEP. Set up a mini workgroup at IEP's annual meeting.
12	Establish thresholds for evaluating all types of data collected by the RMP	TRC	This task is beyond the purview of the RMP. More of a regulatory issue.
13	Analyze an additional 20-25 alkylated PAHs	TRC	Done. We will post these data on the web.
14	Analyze concentrations of biologically-available forms of contaminants in water	TRC	The RMP will add bioavailable forms of contaminants to the analytical list as they become issues.
15	Incorporate process studies, partnering with academic researchers and apply for third party funding	TRC/SFEI	Prepare memo summarizing existing efforts. The RMP will continue to look at joint proposals/projects to answer management questions. SFEI is looking into the role of certain staff as adjunct faculty at local universities.
16	Continue the transition from a data collection focus towards synthesis into informational products that will aid decision-making	TRC/SC	Not yet addressed by TRC
